

Race Publisher Release Notes

Version 3.1.0

- GPS downloads now work under Vista.
- Live Marks for : “start boat”, “start pin”, “finish boat”, and “finish pin”. Tracks with these names can be included as boat tracks but will be drawn as marks and not be included in the auto camera tracking.
- Bug with changing an existing boats fleet during GPS download has been fixed.

Version 3.0.0

- Support for team racing.
- Bug with modifying the tail length in the marks page is fixed.
- New skin – Vista compatible.
- Click and drag support for moving marks.

Version 2.7.0

- Added database maintenance option under race maintenance. Allow user to delete and rename fleets, series, and boats.
- Added support for setting free bit. User is queried for free series or not when creating a series. User is only given the option if the **FreePublisher** role is set.

Version 2.3.0

- Includes support for team racing.
- Include support for smart DB synchronizing.

Version 2.2.0

- Includes support for team racing

- Smart DB synchronizing.

Version 2.1.7

- Canceling out of the race select dialog when publishing races now returns to the main menu.
- Publisher no longer syncs the race table prior to allowing user to select races to be published.
- The Modified time in a published race should now be the same as the published time once after the race has been published. Prior to publish the modified date may be different than the published date.
- The Done button in the publish page is only enabled after all downloads have completed.
- When logging on as a different user after having been off-line, changes made under the previous login will be saved before synchronizing the with the new users DB info.

Version 2.1.6

- Changed race order when selecting a race for copying or modifying to sort by reverse start time (newest on top)
- Changed boat selection behavior in the Select Boats page.
- Improved the error message displayed when track date does not fall on the current date to show the publishers current date rather than just say “current date”.

Version 2.1.5

- Improved GPS download code.
- Fixed track filtering bugs.

Version 2.1.1

- Fixed Fleet Name input bugs.

- Improved Fleet and Series name invalid character checking.
- Changed large Copy button in the course heading page to “Import Course”.
- Fixed login bug where canceling out of the login screen would log you in as the last successful login.

Version 2.1.0

- Added the version number to the status bar.
- .KRF race files are now much smaller than in the past. Only the data for the race is saved, not the whole track.
- Mystery series name bug has been fixed. This only occurred if you deleted your publisher.dat file and then immediately modified a race or if you modified a race that was different from the series you had been working on.
- Elapsed time in the marks page is now correct, it was off by one minute.
- Tail length will now switch out of auto mode if the tail length is explicitly changed.

Version 2.0.0

- Fixed bug requiring user to tab out of creating a new series, user can now click on the race number.
- Optimized parts of the DB synchronization, and added progress dialogs when sync-ing before and after publishing.
- Fixed bug with editing marks using direction buttons in advanced tab.
- Fixed bug with zooming when adding and removing the start boat.
- Fixed bug when loading tracks that only have one track point in the race day.
- User must always log in if they are on-line
- The publisher now saves the local configuration info in a .dat compressed XML file rather than a raw XML file. New file name is publisher.dat.
